

Modern Workplace

Medialine Unified Endpoint Management

With Medialine UEM as a managed service, you can easily, efficiently and securely manage all devices and applications

Any Place, any Time, any Device!

Endpoint management is becoming increasingly complex due to the growing number of functions, processes, device diversity, compliance, rights structures, and geographical requirements. The efficient integration of end devices into various work processes has become a strategic competitive advantage. Modern companies now use a variety of devices to work in a need-based, efficient, cost-effective, and flexible manner. The commissioning and operation of this infrastructure is challenging and time-consuming.

UEM as a Managed Service

Inadequate usability and user-friendliness, along with security and compliance aspects, are major challenges for many companies in endpoint management. With Medialine UEM as a managed service, you can easily and securely manage your devices and roles on a central, managed platform in the data centers of Medialine AG. Through intelligent process mapping, the underlying software automatically gathers all relevant information using smart scripts and the so-called „abstraction layer.“ This means that no IT resources are needed for management. Required work steps are executed with a mouse click and a complex technology becomes a simple and user-friendly environment that automates all important business processes.

The path to the Modern Workplace

With Unified Endpoint Management, companies can take the step towards the Modern Workplace today! The unique integration of AD-managed devices and non-AD-managed devices on a central platform makes application, device, and security management truly easy and clear. You can manage your stationary devices, Fat Clients, User-Roles and -Rights as well as your Mobile Devices or IoT instances automatically and easily. This includes classic system management functions such as Asset Management, Patch Management, Image and Software Distribution, and Mobility Management functions such as File Sharing or Mobile Deployment. Additional endpoint solutions (e.g., IoT Management) can be integrated into the flexible management appliance as needed. This way Medialine UEM grows with your company and its requirements.

Medialine Unified Endpoint Management

an administration platform | extensive reporting
central administration of users, roles and authorizations

Mobility management

non-AD managed devices | Mobile Devices

- Automated administration & inventory
