Business Software

Boxxer ERP

With the flexible merchandise management solution for businesses, gastronomy and retail, you can efficiently optimize your resources - starting from the first user!

Boxxer ERP (Enterprise Resource Planning) manages your company's processes as well as the data of your business partners, products, operations, and evaluations easily and clearly.

Manage processes efficiently

Boxxer is an enterprise software specifically designed to meet the needs of small and medium-sized businesses and can be used as a POS cash register software, merchandise management and service billing program, as well as an ERP. It is particularly distinguished by its well-integrated interfaces to marketplaces, payment systems, and Office 365. Boxxer can be implemented in businesses of any industry, but is especially suitable for retailers, service providers, online shops, marketplaces, and small producers, serving a wide range of business forms.

Overview of Boxxer:

- for small and medium-sized businesses
- 1 to 25 users
- multi-client capable
- open for interfaces
- Main industries/sectors are trade, service providers, online shops, marketplaces, and small-scale production

Interfaces

- Office 365 (e.g. Outlook, Sharepoint)
- Cobra CRM
- Logistics service providers (e.g. UPS, DHL, Hermes)
- Shop systems with B2B functions (Shopware, Oxyd)
- Google Business (B2B address completion, other databases possible)
- ePost shipping
- Accounting programs (e.g. Datev, Sage, Addisson)
- eCat ETIM (XML catalogs)
- Newsletter tools (e.g. Newsletter2go)
- ZUGFerd, XRechnung
- Route planning (e.g. Google)
- Marketplaces (e.g. Amazon, eBay, Idealo)

With the release of Boxxer 2.0, the software has become even more flexible and additional interfaces have been created, such as Sage-Office-Online or Datev for financial accounting, online cash register archives, or modules for factoring or newsletter systems. This allows Boxxer to be easily connected with other industry-specific software tools. The program works on a role-based system, is user-friendly, cloud-enabled, and is available in three different versions to ensure a tailored solution for your company. With Boxxer, you can meet your digitalization requirements and focus on your core business again.

Role-Based

Boxxer is a „role-based" software, where each user only has access to their assigned tasks, responsibilities, and rights. This allows for a clear separation of access structures between, for example, warehouse workers and management.

Clear and concise

By hiding certain functions, employees can better focus on their tasks and be more concentrated at work. Information tools immediately show what still needs to be done, what has been missed, and where action is needed. Various events, conditions, and omissions can be monitored.

Cloud-enabled

Boxxer is cloud-enabled and can be accessed from anywhere with an individual client. Boxxer also runs on traditional local servers and computers.

User

Boxxer comes in 3 versions and is operational with just one user. Additional modules can be added within the versions. Boxxer can be used in various industries and company sizes, ranging from a single computer cash register in gastronomy to small and medium-sized businesses.

Online Shop Integration

If you operate or plan to operate your own online shop, Boxxer supports you with an interface to Shopware, Oxyd, etc. With the Boxxer add-on module, you can optionally operate an unlimited number of online shops. Boxxer synchronizes different areas of orders, items, customers, variants, and attributes - you don't have to maintain your master data twice, but only in Boxxer!

Boxxer versions

Boxxer comes in various versions and is perfectly suited for small and medium-sized businesses.

Boxxer POS-system

Boxxer as a POS-system can be used as a single workstation version on a computer cash register but is also available as a complete system configuration in a cash register network. An interface to ESL-Label is optionally available. The POS cash register can be used in any industry, as the management of products and groups is already based on the merchandise management system in the background. By adding licenses, the POS cash register system can easily be extended to a full-fledged ERP program. The assignment of mandatory properties is no problem for Boxxer. For example, industry-specific properties such as allergens can be linked to a product and displayed on the label or similar. Boxxer also enables the integration of your online ordering system with the POS cash register. This allows you to implement „click & collect". Buy online, pick up in store. Customer cards and discounts, cashing with zip code registration, or a voucher module can also be used.

Boxxer Standard

Boxxer Standard encompasses the complete address management for customers and suppliers, as well as all common standard process chains. Boxxer Standard can be used for 5 users and 1 client. The integration of standard process chains is just as present as the HBCI banking module, which allows for easy banking control. With the addition of optional modules, the Boxxer system can be customized for your company!

Boxxer Pro

Boxxer Pro represents the unrestricted complete version and can be used from 5 users onwards. In the Pro version, Boxxer can be set up for all areas of the company, so that it can be configured exactly according to your wishes. We are happy to provide you with a specifications document for the use of Boxxer. The number of users is unlimited with Pro.

System requirements

Boxxer uses MySQL as its database foundation. Any Windows version that can use the DotNet components can serve as the operating system environment. Upon request, we can also configure your hardware so that you get the maximum benefit from Boxxer!
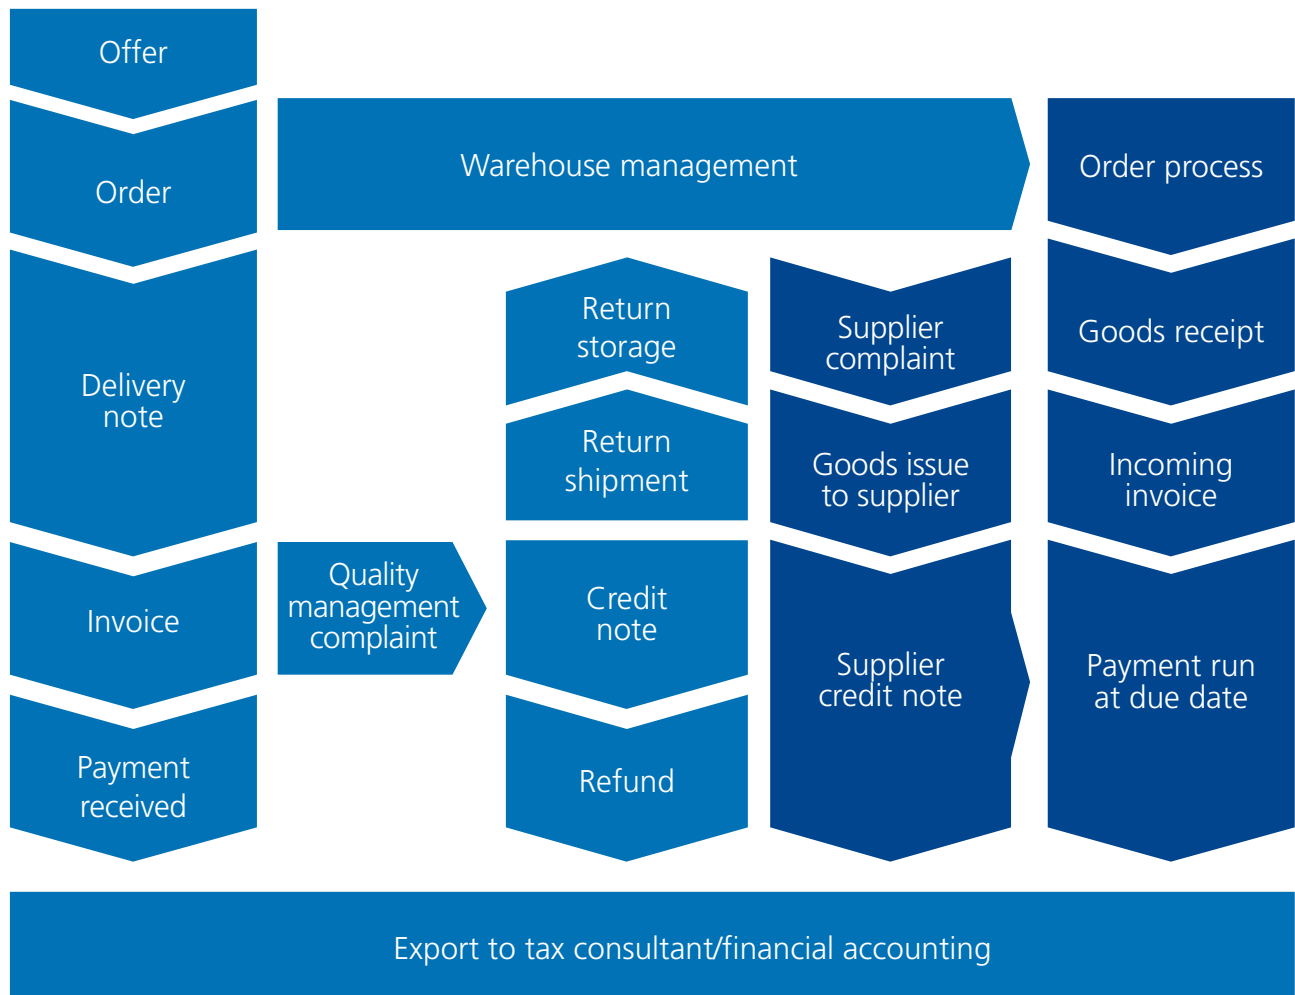

Contact

We would be happy to provide you with more detailed information on the available Boxxer versions and prices. Just talk to us or send us an email at **sales@medialine.ag.**

- Stock levels, etc. can be synchronized in a branch network.
- Credit and voucher management for customers, students, employees

Boxxer Standard

Boxxer Standard includes a complete address management system for customers and suppliers, as well as all common standard process chains. Additional transaction types and process chains can be optionally defined and inserted. The Boxxer Standard version is designed for one client and up to 5 users (optionally expandable). It is multi-warehouse capable, including commissioning and ordering processes.

The master data mask for business partners gives the user a comprehensive view of the current status of open transactions, transaction history, people, and basic information of the business partner. From this overview, new transactions can be directly created depending on the user's rights! By clicking on the corresponding tabs, you can view the master and movement data.
