Hosted File Cloud

Maximum security for your data exchange!

Encryption is the basic building block of data security. It is the simplest and most important way to ensure that the information of a computer system is not stolen and read for fraudulent purposes.

Protect your data through end-to-end encryption with Medialine's Hosted File Cloud Service. This service includes providing and operating a file sharing instance for the secure exchange of content such as files, images, or videos from the Medialine Public Cloud.

The Hosted File Cloud Service is based on the open-source software of Nextcloud and is offered as a shared and dedicated service. In terms of data protection and privacy, it offers complete transparency as the entire code is visible to everyone. This allows security vulnerabilities to be identified, reported, and closed early.

What awaits you:

Medialine File Cloud Services are operated in Germany in ISO27001-certified data centers and are subject to strict data protection laws.

The user can expect a modern, intuitive design of a self-service portal that is easy to use and allows for automatic synchronization of devices.

All data and files are secured through an encrypted connection and are available at all times from multiple different devices.

The use of open-source ensures compatibility with different systems (directly in the browser, apps for iOS, Android, Windows, Linux).

When it matters, our experts are there for you - maintenance, support, and deployment are included in the Hosted File Service.

Especially when cooperative project work across company borders is required, the Hosted File Cloud Service from Medialine makes it possible to easily and securely work on documents together, share them, and make them available for individuals or the entire team.

Would you like to find out more about this solution and how to maximize your business success? Contact us now at sales@medialine.com and we'll find out together.

Subject to change and errors. Our general terms and conditions apply in the current version. The product description does not constitute a binding offer and is for informational purposes only.
