

Cyber Security Quick Check

How secure is your IT really?

Increasing dangers from cyber-attacks require vigilance and higher IT security standards in companies.

Almost every second company has been a victim of cyber-attacks in the past two years. Criminals increasingly use new attack surfaces in cyberspace, which arise, for example, from the increasing digitization of workplaces, Industry 4.0 and the Internet of Things. In addition to the number of cyber-attacks, the diversity of attack scenarios and the resulting damage are also experiencing steady growth. Many protective measures that were once considered sufficient no longer offer reliable and comprehensive protection today. At the same time, companies' dependence on the success of digital processes is increasing.

On the safe side

How well are you prepared against attacks? Does your cyber security concept have weaknesses or potential for improvement? Do you need a clear and transparent 360-degree overview of the stability and security of your IT services?

As part of our „Cyber Security Quick Check“, we will analyze the status quo of your IT landscape together with you in the form of structured interviews. As a result, you will receive an overview of where you can start to raise your applications, systems, and infrastructures to a new level of security.

Gain clarity

As part of our „Cyber Security Quick Check“, we will examine:

- Applications
- Systems
- Locations
- Network infrastructure
- Responsibilities
- Basic services
- Service providers

as well as the interdependencies between these infrastructure components.

Prerequisites

In order to be able to carry out our „Cyber Security Quick Check“ efficiently, we need your cooperation or input in the following areas:

- List of contacts & responsibilities (area, role, function)
- Willingness to conduct workshops to assess the current situation (approx. 2 hours per area)
- Helpful: overview of the IT infrastructure (if already available)
- Essential (external) requirements, e.g., from trade associations

You will receive

- A transparent 360-degree overview of your existing IT infrastructure
- A written analysis of the status of your cyber security protection measures
- Specific recommendations for optimizing your infrastructure
