IT Security

Veeam Cloud Connect

**Are you looking to set up a second backup location?
Do you need to invest in new hardware to do so?**

Solve these structural problems easily with Veeam Cloud Connect in the new Availabilty Suite 8 from Veeam. Use the backup repository in the Medialine Company- Cloud to add extra security to your backup. Choose Medialine AG as your certified service provider directly in the Veeam software and pay only for the storage you need. Avoid the risk of catastrophic data loss by connecting to our backup repository. This is the easiest and most efficient method for storing backups in the cloud.

Benefits

Hosting external backups

Move your backups externally to the Company-Cloud repository via a reliable, secure SSL connection and a Veeam Cloud Gateway without additional licensing requirements.

Complete transparency and control

Access and restore data in the hosted backup repository directly through the backup console. Track usage of the CompanyCloud repository and receive notifications when updates are due for your hosted environment.
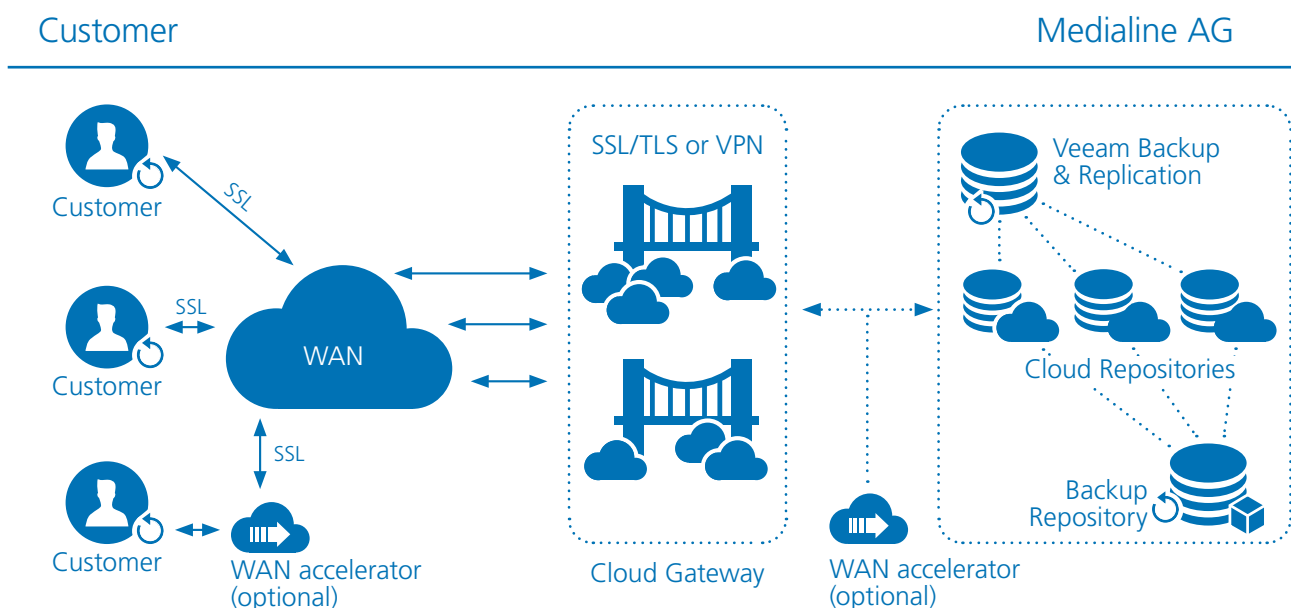

Modern backup architecture

Optimize Veeam backup technology with backup copy jobs and integrated WAN acceleration, unlimited incremental backups, GFS retention policies (Grandfather-Father-Son), and much more to comply with the „3-2-1 rule" - all with just one product.

End-to-end encryption

Encrypt your data at the source (before leaving your network environment) without negatively impacting the data compression rate of integrated WAN acceleration.

Integration of hosted backup repositories directly into the Veeam backup console

- Simply click „add service provider" and enter the access details we provide.

- Cloud repositories in the CompanyCloud are displayed in your backup infrastructure.

- VPN or a separate console is not required. Cloud repositories work just like local repositories and are still available even if the primary backup or data center is lost.
